

Empower Excellence in Resident Performance

Who We Are

Effective outcomes-based medical education requires experiential learning with clinician-educators: real-world learning encounters that require precious time in the classroom, hospital, clinic, or community. OnlineMedEd provides a complementary, longitudinal, and integrated curriculum that enables learners to asynchronously, master core knowledge, and develop the practical applied skills necessary for safe, effective patient care.

Testimonial

“Absolutely [the] best resource that I used throughout my clinical rotations in medical school and used AGAIN during residency to study for my boards (as well as to prepare for my off-service months in internal medicine, as I am a psychiatry resident).”

Resident

University of South Carolina School of Medicine

Balance Professional Workload

Give faculty curricular resources to free up time and effort that could be dedicated to developing meaningful learning activities or to professional responsibilities like patient care and research.

Accelerate Time to Mastery

OnlineMedEd’s resources provide the need-to-know foundational knowledge from which educators can facilitate development of the skills and attitudes required to be a great physician.

Standardize Learning Experience

OnlineMedEd ensures a comparable educational experience across multiple clinical sites to help programs and institutions meet accreditation requirements.

Graduate Medical Education Solutions

OnlineMedEd provides physicians with an integrated clinical curriculum that spans the continuum of medical education so learners have access to the knowledge they need and opportunity for professional growth at all stages of their education. OnlineMedEd recognizes that as physicians' patient care responsibilities increase, so do the challenges of learning in a busy clinical environment. We help ease this burden by ensuring residents and fellows have the right resources at the right moment, when and where they need them.

Meeting Common Requirements

Learn more about how OnlineMedEd's curricula, tools and other resources can help programs and institutions meet essential ACGME Requirements.

Transition to Residency

Through our GME Intern content and resources, incoming residents are equipped with essential time and patient management tools, best practices in documentation and care transitions, and effective teamwork skills they need to begin their training.

Build Your Foundation in Osteopathic Medicine

Our OMM course provides a practical foundational curriculum for Osteopathic first-year residents' baseline knowledge and instruction in OMM to ensure those transitioning to the next phase of their professional development are well prepared.

Maintain Clinical Competency

OnlineMedEd's two-year clinical curriculum supports resident learning and remediation by providing a solid foundation in core medical knowledge designed to reinforce and maintain clinical competency, closing any gaps identified in a resident's professional development.

Promote Preventive Care through Food as Medicine

Available for CME as well as GME learners, this curriculum provides comprehensive training in nutrition and patient counseling, helps learners identify patients at risk of food insecurity, and supports clinicians as they address chronic disease outcomes.
